

ABSTRACT OF THE DISCLOSURE

When "store" of intermediate data is designated in a print process, a spooler stores intermediate data and an output job setup file in a spool file. When the stored job is selected, a previewer displays a list of jobs, and displays a print preview image. In this case, pages are displayed so that a page with the maximum size just falls within a display window, and other pages are displayed in the same scale as that of the maximum page.
